Gather Magic Tool 🎟️

A modern web application to browse events, register, and book tickets easily. Built using Vite, React, and modern frontend technologies.

🚀 Features

- User registration and login
- Browse available events
- Book tickets for events
- Responsive and modern UI
- Fast development using Vite

🛠️ Tech Stack

- React.js
- Vite
- JavaScript / TypeScript
- CSS / Tailwind (if used)
- Node.js & npm

📂 Project Setup Instructions

Follow these steps to run the project locally:

Step 1: Open project in VS Code

Open the project folder in Visual Studio Code.

Step 2: Install dependencies

Open terminal in VS Code and run:

npm install

This will install all required packages.

Step 3: Run the development server

Run the following command:

```
npm run dev
```

Step 4: Open the application

After running the command, you will see a local link like:

http://localhost:5173

Press **Ctrl + Click** on the link to open in browser.

Step 5: Use the application

- Register a new account
- Login to your account
- Browse events
- Book tickets

📁 Project Structure

```

⚙️ Requirements

Make sure you have installed:

- Node.js (v16 or higher)
- npm

- VS Code (recommended)

👷 Author

Developed as part of a web development project.

📌 Notes

- Run npm install before starting
- Run npm run dev to start development server
- Do not delete node_modules folder after installation

✅ Status

Project is ready for development and testing.
